

## Asthma and Vitälzým Testimonials

### ASTHMA

My name is Peder Heineman. I am writing you to thank you for your miracle product, Vitälzým.

In 1945, at age 6, my friend, Bobbie and I fell into a pocket of radiation while playing the game Red Rover. We did not know it was radiation then, but immediately our lungs started burning badly. Betty, a girl slightly older than us, helped us up. It felt like we had the wind knocked out of us but it did not go away. Bobbie died within a few months and Betty died at age 35. I survived, but had the worst Asthma, and scar tissue on my lungs (and in and on my organs and throughout my body). I could exert myself for only 2 or 3 minutes and I would collapse gasping for air. My whole life since then has been a health nightmare.

I didn't find out I had been radiated until 1995, fifty years after the fall into the pocket of Iodine 131. The release was 650,000 curries of Iodine 131. After raining, the moisture caused the pocket to form.

I am now 63 and had been referred to as 'death warmed over' since 1996, because the medical community did not have a category for my medical problem. Just one month ago, I took what I thought was my last trip to my Doctor. He let me list my medical maladies and then said, "your body is full of scar tissue, right? So, take this new product and thank the man upstairs, because it eats scar tissue, and it is a miracle."

I now have increased lung function by 25%, virtually no pain, can walk with my wife, walk two flights of stairs without getting winded, and feel better every day!

How can I thank you for this miracle? Maybe by helping others understand that this miracle product can help all people feel better, because fibrin is caused by aging and is formed after injury or illness. Please feel free to E-mail me with questions at [downwinder1@aol.com](mailto:downwinder1@aol.com). I will be pleased to help.

Thank you for my miracle.

-- Peder H, Wilkesboro, NC
